S.No: 4	Exp. Name: ***Salary Increment***	Date:2024-02-26

ID: 8115U23CS043

Aim:

An employee working in a company and getting a salary, after promotion an employee gets 10% increment. Write a python program to find the current salary.

Source Code:

SalaryIncrement.py

```
a=float(input("Current salary: "))
print("Current Salary:",a)
ka=a+(10/100)*a
print("Salary after 10% increment:",ka)
```

Execution Results - All test cases have succeeded!

Test Case - 1
User Output
Current salary:
50000
Current Salary: 50000.0
Salary after 10% increment: 55000.0

Test Case - 2
User Output
Current salary:
60000
Current Salary: 60000.0
Salary after 10% increment: 66000.0
